Filter Plant Performance Evaluation It focuses on effective

use of the existing water treatment processes as barriers against passage of particles to the finished water. It consists of two components - a Comprehensive Performance Evaluation (CPE) followed by Comprehensive Technical Assistance (CTA). A CPE is conducted to identify the factors limiting treatment plant performance. OPTIMIZING WATER TREATMENT PLANT PERFORMANCE USING THE ... Microscopic Evaluation Technique for Filtration Plant Performance The purpose of this procedure is to evaluate the performance of public water supply filtration systems. A minimum of 300 gallons of both raw and finished water should be collected. The evaluation is based on the filtration plants ability to remove Giardia sized and larger particles. Water Filtration Plant Performance Evaluations Performance evaluation of existing treatment plant is required to assess the existing effluent quality and/or to meet higher treatment requirements, and to know about the treatment plant whether it is possible to handle higher hydraulic and AWSPT 111-2 organic loadings.
